Sequence analysis of a 3.5 Mb contig in human 19p13.3 containing a
serine protease gene cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Direct Submission
Submitted (03-Aug-2000) DOE Joint Genome Institute, Lawrence
Livermore National Laboratory, Livermore, 62 94550
On Aug 3, 2000 this sequence version replaced gi:2911257.
Map and Sequence oriented from p-telomere to centromere. Bases
1-1791 from PCR product; bases 1385-42805 from clone R29144. This
sequence overlaps cosmid R30295 (LLNLR-264D1, AC011544) on the left
from bases 1 to 281 of this accession and overlaps cosmid R33114
(LLNLR-293G10, AC004258) on the right from bases 40533 to 42805 of
this accession. Additional chrly map and sequence information are
available at: http://www.bio.llnl.gov/bbrp/genome/genome.html.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Direct Submission

Submitted (05-FEB-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requestes: clonerequest@sanger.ac.uk

On Sep 19, 2000 this sequence version replaced gi:10129695.

During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw.; SMISSPROT; Tr.; TREMBL; Wp.; WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_eleagns/wormpep This sequence was generated from part of bacterial clone contigs of human chromasome 20, constructed by the Sanger Centre Chromosome 20 http://www.sanger.ac.uk/HGPC/hcl20

Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGPC/hcl20

IMPORTANT: This sequence is not the entire insert of clone RP4-591C20 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap.

The true right end of clone RP4-591C20 is at 139505 in this sequence. The true right end of clone RP4-591C20 is at 139505 in this sequence. The true right end of clone RP1-238115 is at 42466 in this sequence. The true right end of clone RP1-33815 is at 42466 in this sequence. The true right end of clone RP1-33815 is at 43466 in this sequence. The true right end of clone RP1-33815 is at 300 in this sequence all regions were either double-stranded or sequenced with an alternate were either double-stranded or sequenced with an alternate were either double-stranded or sequenced with an alternate per plasmid subclone or more than of lones. RP4-591C20 is from the library RPCI-4 constructed by the plasmid by the
   two isoforms, a gene for a novel phosphoribulokinase with three isoforms, the KIAA1196 gene, the 5' part of the TOM gene for a putative mitochondrial outer membrane protein import receptor similar to yeast pre-mRNA splicing factors Prpl/Zerl and Prp6 and AL118506
                                                                                                                                                                                                                                                         HTG; CpG island; cysteine string; DnaJ; import receptor; KIAA1196;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

Direct Submission

Submitted (27-SEP-1999) Drosophila Genome Center, Lawrence Berkeley Laboratory, MS 64-121, Berkeley, CA 94720, USA

On Feb 15, 2000 this sequence version replaced gi:6466918.

For further information about this sequence, including its location and relationship to other sequences, please visit our sequence archive Web site (http://www.fruitfly.org/sequence/) or send email to bdgpefruitfly.berkeley-edu. All contigs in this submission meet the following cutoffs: length >= 200 bases.

* NOTE: This is a 'working draft' sequence. It currently consists of 107 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N. but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence as soon as it is available and the accession number will
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                unknown length

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 29
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 74
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
